CHOG SURVIVOR

HORROR-ADVENTURE LANDING PAGE BRIEF

Visual direction: cinematic dark fantasy, eerie moonlight, fog, ancient ruins, a recognisable Chog-inspired survivor character, and a clear space for the opening headline.

Use this document as a design brief for the existing Chog Survivor project. The generated art is a visual concept/mockup—not a finished game asset or proof of official Chog IP approval.

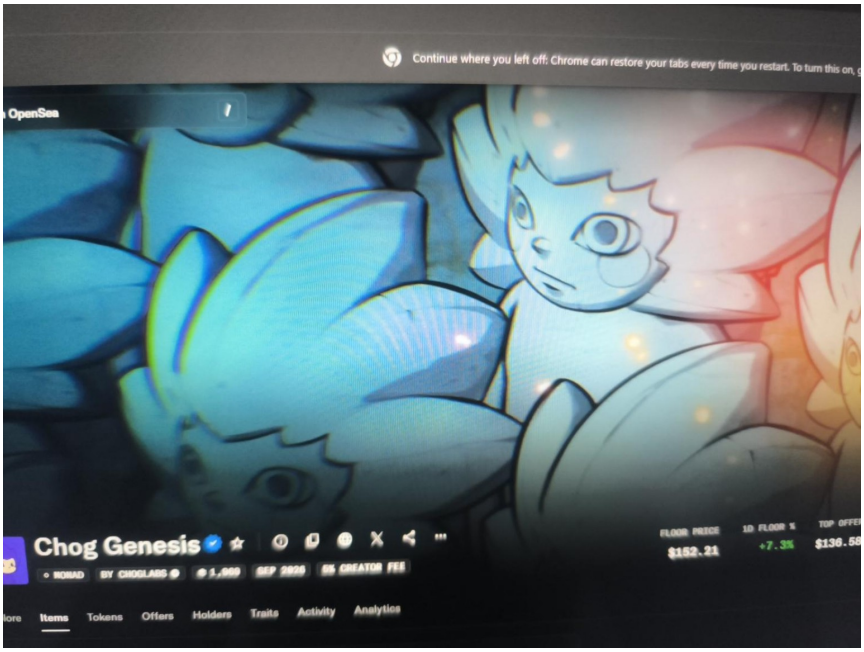

1. MotionSites: what to do when search returns nothing

The earlier exact-name searches may not work because MotionSites is primarily a library of visual previews and prompts, not a general-purpose search engine. Do not waste time trying to force a result for “3D Collectible Hero.” The current official homepage visibly lists **3D Character Studio**, **Frozen Cave**, and **Obsidian** among its designs. Open the homepage and browse the cards directly; if you cannot access those cards, skip the template hunt and use the custom brief in this PDF.

Recommended browsing order: (1) 3D Character Studio for the character-led layout, (2) Frozen Cave for environmental mood, and (3) Obsidian for dark interactive styling. Use one design as the foundation only. Do not combine three complete templates.

Official library: https://motionsites.ai/ • Templates: https://motionsites.ai/templates

Original Chog Genesis visual reference supplied by the project owner

Use the official collection artwork and branding only within the hackathon's rules and any applicable Chog IP permissions. The concept artwork in this document should not be presented as official collection art.

2. Recommended first-page experience

Mood

Beautiful horror—not a cluttered Halloween page. Dark charcoal, blue-grey moonlight, dirty white typography, and small red-orange accents.

Hero composition

Full-screen cinematic forest/ruins background. Keep the left third relatively dark and uncluttered for the title and buttons; place the Chog character toward the right.

Headline

SURVIVE THE WILD.

Tagline

Every choice leaves a mark.

Primary button

ENTER THE WILD

Wallet button

CONNECT WALLET

Motion

Slow drifting fog, restrained particles, subtle parallax, gentle light movement, and a brief entrance transition. Respect reduced-motion preferences.

After entry

Show the connected wallet's eligible Chog Genesis NFTs, allow selection, then display the real survival state, next event, meaningful choices, transaction status, and confirmed result.

Visual references

Dark foggy forest photo references: https://unsplash.com/photos/forest-with-fogs-jKrTJg3y-kU and https://www.pexels.com/photo/a-forest-filled-with-fog-6151406/. Check the current licence and attribution requirements before using any external image in the shipped website. The generated concept art above is a safer starting point for layout exploration, but the final artwork should be checked against Chog's permitted IP use.

```
PROJECT: CHOG SURVIVOR
TASK: FRONTEND HORROR-ADVENTURE LANDING PAGE

Act as a senior frontend engineer and game-interface designer. We are building Chog Survivor, an on-chain survival game fo

FIRST: inspect the repository, current frontend framework, contract ABIs, network configuration, wallet connection code, a

VISUAL DIRECTION
Create a premium cinematic dark-fantasy survival experience inspired by the attached visual references:
- Abandoned forest, ancient ruins, moonlight and atmospheric fog.
- A recognisable Chog character as the main visual focus.
- Deep charcoal and blue-grey tones with restrained red-orange highlights.
- Strong, readable typography and carefully controlled visual effects.
- Keep the left side of the hero relatively dark for headline and controls; place the character toward the right.
- Avoid generic SaaS cards, bright neon gradients, clutter, and a conventional dashboard look.

FIRST SCREEN
Brand: CHOG SURVIVOR
Headline: “SURVIVE THE WILD.”
Tagline: “Every choice leaves a mark.”
Primary action: “ENTER THE WILD”
Wallet action: “CONNECT WALLET”

The first screen should feel like entering a dangerous world. The main action should lead into the actual game flow. Do no

GAME FLOW
- Connect wallet and handle disconnected/error states.
- Verify the current network and the connected wallet.
- Display Chog Genesis NFTs actually owned by the connected wallet.
- Let the player select an eligible Chog.
- Display the real on-chain survival state and history.
- Present the event and choices exposed by the existing game logic.
- Submit the real transaction and show pending, success, revert, and error states.
- Display updated state only after confirmed data is available.

STRICT ENGINEERING RULES
- Preserve existing framework, dependencies, contract addresses, ABIs, and tested backend behavior unless a real incompati
- Do not invent contract methods, state variables, events, achievements, or game rules. Inspect the repository before wiri
- Do not fake NFT ownership, successful transactions, game history, or blockchain data.
- Do not change or redeploy contracts as part of this frontend task.
- Do not hardcode private keys or expose secrets.
- Handle wrong network, empty NFT list, loading, rejected wallet requests, failed transactions, and stale data.
- Make the page responsive, accessible, and performant.
- Respect reduced-motion preferences and avoid flashing effects.
- Use lightweight animations. Do not add a large animation dependency without explaining why.
- Use the attached concept art only as visual inspiration. Do not claim it is official Chog artwork.

IMPLEMENTATION ORDER
1. Inspect and report the existing stack and interfaces.
2. Build the responsive landing hero and visual system.
3. Connect the existing wallet flow.
4. Connect real NFT ownership and game state.
5. Connect the real survival actions.
6. Test all transaction and error states.
7. Check mobile layout, accessibility, and performance.
8. Report changed files, commands run, test results, and known limitations.

Do not stop at a static mockup. Deliver a working frontend connected to the existing project. Prioritise a polished core e
```

Important: attach the generated concept image and original reference image to the Codex/chat context if the tool supports image attachments. If the current project is already open in Codex, ask it to inspect the repository before making changes.

4. Before publishing the landing page

■ The opening page looks good on mobile as well as desktop.

■ The Chog character remains visible and recognisable at common screen sizes.

■ The first screen has one clear primary action and a separate wallet action.

■ Wallet and NFT ownership come from real contract reads.

■ No fake transaction success, fake inventory, or invented game data remains.

■ All buttons have working destinations/actions.

■ Loading, errors, rejected signatures, and wrong-network states are handled.

■ Motion is subtle and respects reduced-motion preferences.

■ The final art is allowed under the Chogathon/IP rules and any image licence.

■ The frontend changes do not alter the tested contracts or backend.
